

Project Vision

Novosibirsk is a large, the third most populous city in Russia. There are numerous interesting and beautiful places to go. However, not all are aware of them. Hence, many people have problems with finding these places for taking photos or just taking a walk.

Our goal is to make the process of finding new interesting places worth of paying visit to simpler, more convenient and quick.

To do so, we are going to create an application which will help a user (it might be an artist looking for an inspiration, a group of friends, a couple in love, a senior or worker who are tired of dull and routine life) to experience all splendid spots in the city and discover all of its hidden charms.

The functional of our application will include:

- A map of Novosibirsk (in fact, in the future it will not be a problem to extend the list of supported cities) where each building/place has its own description, rating (from 1 to 5) and reviews of other users.
 - A smart search by categories (such as museums, parks, etc.), rating and desired distance of places from a user.
 - A support of user accounts with their personal page for blogs, photos, reviews, etc.
- Besides this, a user may make friends in the application in order to chat with them and track each other's location.

Beyond that, great emphasis will be put on the design of the application which should be user-friendly, convenient and stylish.

Best wishes,

The team 'THE CITYLOGIA'
